Art Unit: 3761

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-33, drawn to an indwelling catheter to drain urine from a bladder, classified in class 604, subclass 544.
- II. Claims 34-48, drawn to an assembly of an indwelling catheter and insertion tool for draining urine from a bladder, classified in class 604, subclass 327.
- III. Claims 49-71, drawn to a method of draining urine from a bladder to a position distal to a urinary sphincter muscle, classified in class 604, subclass 544.
- IV. Claims 72-87, drawn to a method of using an indwelling catheter and insertion tool to drain urine from a urinary tract, classified in class 604, subclass 326.
- V. Claims 88-91, drawn to a method of maintaining an internal passageway through an indwelling catheter, classified in class 623, subclass 23.66.

The inventions are distinct, each from the other because of the following reasons:

2. <u>Inventions II and I</u> are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the

Application/Control Number: 10/665,742

Art Unit: 3761

particulars of the subcombination as claimed because (1) a catheter lacking a balloon, inflation tube and coiled section could be used with the insertion tool. For example, a straight catheter without a balloon could be combined with the insertion tool. The subcombination has separate utility such as (2) dispensing adhesive material to inaccessible places during construction or repairs. For example, the catheter could be used in its uninflated state to dispense adhesive.

Page 3

- 3. Inventions IV and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because (1) a method lacking the step of providing an insertion tool could also be used to drain urine from the urinary system. The subcombination has separate utility such as (2) delivering medicines to the urinary system. For example, the method could be used for administering antibiotics through the drainage tube.
- 4. Inventions <u>V and III</u> as well as <u>V and IV</u> are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because (1) the

Art Unit: 3761

method of flushing a catheter to prevent clots could also be practiced when draining an abscess or abdominal cavity after surgery. The subcombinations have separate utility such as (2) draining urine from a bladder, and inserting a urinary catheter.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

5. Inventions <u>III and I</u>, as well as <u>III and II</u>, <u>IV and I</u>, <u>IV and II</u>, <u>V and II</u>, and <u>V and II</u> are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case (2) the apparatuses can be used to practice a different process, such as administering medication to the urinary system, or dispensing adhesive materials to inaccessible places during building construction or repair.

Art Unit: 3761

6. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

7. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 3761

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adam Marcetich whose telephone number is 571-272-2590. The examiner can normally be reached on 8:00am to 4:30pm Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tatyana Zalukaeva can be reached on 571-272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
